Portfolio: arocha-dev-portfolio.netlify.app

PROFESSIONAL SUMMARY

Software developer with more than 5 years of experience in IT and more than 2 years dedicated to development. My path started in technical support and networking, working directly with users and clients, and today I build and maintain microservices-based systems with Node.js, TypeScript, Java (Spring Boot), REST APIs, RabbitMQ and Docker, on relational (MySQL, PostgreSQL, SQL Server) and non-relational (MongoDB) databases. I combine that technical profile with client orientation, documentation and testing of my own work, and the ability to diagnose and resolve incidents. Currently studying Computer Engineering at the School of Engineering (UdelaR).

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, PHP, Python, SQL, Dart, C#

Backend: Node.js, Spring Boot, Laravel, FastAPI, REST APIs, microservices architecture, event-driven architecture

Databases: MySQL, PostgreSQL, MongoDB, SQL Server (relational and non-relational)

Systems integration: REST, RabbitMQ (asynchronous messaging), HTTP SSE, API Gateway, Redis, Sequelize, JPA/Hibernate

Frontend: React, Vite, jQuery, MUI, HTML, CSS

Mobile: Flutter, Dart, Android Studio

Infrastructure and DevOps: Docker, Docker Compose, Linux (servers and clients), VPS servers, Proxmox, CI/CD

Observability: Grafana, Prometheus, Loki, Tempo, OpenTelemetry

Management and documentation: Jira, Confluence, Miro, Git, GitHub, agile methodologies (Scrum)

Artificial intelligence: Model integration via API (OpenAI) and use of coding assistants (Claude)

Soft skills: Client orientation, effective communication, teamwork, analytical thinking, problem solving, working under pressure and continuous learning.

PROFESSIONAL EXPERIENCE

Full Stack Developer | Grupo Gamma

September 2024 - Present · Montevideo, Uruguay · Full-time

- Development and maintenance of internal solutions aimed at optimizing management processes, focused on the evolution of a microservices-based CRM.
- Implementation of microservices from scratch, mainly backend with Node.js and TypeScript, exposed as REST APIs.
- Microservices for data migration from CSV files into MongoDB databases, and for backend-to-frontend notifications over HTTP SSE.
- Maintenance and evolution of a legacy jQuery and PHP system used in the daily operation of the business.
- Frontend development with React and Vite, and a mobile client application with Flutter, Dart and Android Studio.
- Data modeling and querying on MySQL, MongoDB and PostgreSQL; deployment in Docker containers; messaging with RabbitMQ and runtime data in Redis.
- Documentation of progress in Confluence and task tracking in Jira.

Freelance Full Stack Developer | JAR.UY

March 2024 - October 2025 · Montevideo, Uruguay · Self-employed, remote

- Requirements gathering and analysis directly with clients, and definition of the technologies and technical approach for each project.
- Development of inventory and sales management applications with React, Node.js and MySQL, including release to production on Linux VPS servers.
- Integration of one of the applications with the backend and the SQL Server database of an existing ERP system.

IT Support Technician | SONDA

September 2022 - September 2024 · Montevideo, Uruguay · Full-time, on-site

- On-site technical support for users in corporate environments: diagnosis and resolution of hardware, software and network incidents.
- Development of GetIP, a C# application running as a service that displays the IP addresses of the interfaces on the user's machine. It removed the need to guide users through the console over the phone and sped up help desk response.

Support Technician | Urupago

August 2021 - September 2022 · Montevideo, Uruguay · Part-time

- Customer service and help desk assistance, with incident logging and tracking in Jira and Confluence.

KEY PROJECTS

Mi Cartera — Microservices-based personal finance platform

Personal project · Java 21, Spring Boot, Python, FastAPI, PostgreSQL, RabbitMQ, Redis, Docker, React

- Distributed architecture of nine microservices behind an API Gateway, orchestrated with Docker Compose over two separate Docker networks (public and internal) with name resolution between containers.
- Domain services in Java 21 with Spring Boot (users, bank accounts, transactions, fixed expenses, goals, files and notifications) following a layered structure (api, application, domain, infrastructure), plus an AI classification service in Python and FastAPI.
- Asynchronous communication with RabbitMQ over shared, language-agnostic event contracts, with retries with backoff, DLQ queues and per-event idempotency to avoid duplicate records on redeliveries.
- End-to-end flow: the user uploads a PDF bank statement, the AI extracts and classifies the movements, the user reviews and confirms them, the transactions are recorded and the frontend is notified in real time over SSE.
- Local observability with Grafana, Prometheus, Loki, Tempo and OpenTelemetry, with end-to-end traceability by correlation_id, and custom scaffolding generation scripts to standardize conventions across services.

Erebil — Inventory and sales management integrated with an ERP

JAR.UY client · React, MUI, Node.js, Sequelize, MySQL, SQL Server

- Web application for inventory and sales management for users of security systems, with a React and MUI frontend and a Node.js backend with Sequelize.
- Web service consuming the API of the client's ERP, integrated with its backend and its SQL Server database, in addition to the application's own MySQL database.

Lima Lima — Inventory and sales management for wholesale clients

JAR.UY client · React, Node.js, MySQL, Linux

- Application developed from scratch, with a React frontend connected to a Node.js backend and a MySQL database.
- Deployment and release to production on a Linux VPS server.

FeelUy — Tour platform for Montevideo

Associate degree capstone project, commissioned by the Ministry of Tourism · Laravel, React, MySQL, Docker, Linux, CI/CD

- Platform that allows building custom tours from points of interest, with a public web application and a back office for managing users, tours and points of interest.
- Laravel (OOP + ORM) and React stack, with a MySQL database shared between both systems, all in Docker containers orchestrated with Docker Compose on Linux servers.
- Network and firewall configuration so that the cloud-hosted application could reach the local network in an Active Directory domain and its shared database.
- CI/CD pipeline that updated the containers' code on merge to main. Teamwork with Scrum, Jira, Miro, Git/GitHub and Confluence. Repositories: github.com/marrz-uy

EDUCATION

Computer Engineering | Universidad de la República (UdelaR) — School of Engineering

2025 - Present · Montevideo, Uruguay

Associate Degree in Networking and Software | UTU — Instituto Superior Brazo Oriental

2021 - 2023 · Web development, client-server architecture, networking and security. Capstone project: FeelUy.

Technical Baccalaureate in Computer Science | UTU — Instituto Superior Brazo Oriental

2018 - 2020 · Programming, OOP, databases, networking and electronics.

LANGUAGES

Spanish: native. English: B2 - First Certificate (Cambridge English, 2021).
